Amazon workboats are designed and built of highest quality materials and to a high standard of workmanship, making the range one of the most rugged available and requiring the minimum of maintenance expenditure.

Already proven in fishing boat form, these hulls have resisted groundings, collisions, and continual rough treatment. Simplicity of design and layout is a major feature of the range, making them suitable for most marine applications. Additional features and special variants are available for passenger, pilotage, towing, cargo and mooring launch operations.

The hull designs have been developed from the traditional fishing craft operating in one of the world's most treacherous sea lanes, the Pentland Firth, an area renowned for its treacherous currents, rocky shores and sudden winter storms.

Amazon — the experience-proven workboats

Front cover picture: 36 ft. Pilot/towing/harbour launch *Celurca* at work at Montrose.

Standard boats available

- **Amazon '24'** — 24 ft. (7.3 m) heavy duty workboat
